

**RPOWER's** delivery system has been tested in the harshest environments with locations processing 2,500 deliveries per day and managing 20,000 customer accounts. Built-in options for handling future, current, and online orders allow each establishment to customize **RPOWER** to target its delivery needs. **RPOWER's** Delivery Dispatcher, Caller ID Integration, and Customer Management utilities keep your business on top of all your take-out and delivery needs.

### The **RPOWER** Delivery Dispatcher

With four different views: By Driver, Running (Out for Delivery), New Orders, or All Orders (Current & Future), the dispatcher displays the checks you need to see when you need to see them. Runs are created simply by selecting the run number (zone), touching the desired checks and then picking the driver. Select a delivery check and choose the Map option to auto-map and print out-driving directions using Google™ Maps. Upon driver return, batch printing and check closing are simple one-touch operations that allow for driver or cashier-controlled cash drawer or banking.

### Caller ID Functionality

Easily retrieve or begin new orders with the **RPOWER** Caller ID integration. **RPOWER** displays and makes selectable each call for simple one-touch selection.

### Customer History & Last Order Recall

**RPOWER** stores your customer order history for a definable period. Past customer transactions are stored for simple one-touch re-ordering. Recurring orders are a breeze no matter how specialized, keeping you on top of your most demanding customers.

### Online Ordering

Enhance your customer's experience through an integrated Online Ordering system. Customer orders placed via web-enabled devices flow seamlessly into your **RPOWER POS** System without human intervention. **RPOWER** Online Ordering partners provide an easy-to-use management center and can cater your site to match an existing web theme.
