

Quick Service and Counter Operations

RPOWER Quick Service and counter operation functionality increases operator efficiency and accuracy, speeding up customer time at the register. **RPOWER** has built several features tailored to improve your point-of-sale performance and maximize your return on investment. **RPOWER** Flashpay allows for small dollar credit card transactions to process without the need for printing or signature capture. Couple these features with **RPOWER's** Customer Rewards Programs as well as its system reliability and see what a powerful point-of-sale system can do for your establishment.

Kitchen Video Display Systems

GO PAPERLESS! **RPOWER's** Kitchen Video Display System requires no third party integration or additional workstations. KDS runs as a secondary terminal from your already existing point-of-sale workstation. Features include: bump-bar or touch-screen controlled, bump-forwarding (to secondary KDS terminals or printers), bump-dependency, bump to page and check recall. Checks display running time, server, table name, items with quantity notation, item color coding and modifiers. Bring your orders visually into the kitchen with **RPOWER's** own Kitchen Video System.

Digital Menu Boards

Far beyond displaying site-specific customizable screens, **RPOWER** Digital Menu Boards can receive instant item descriptions and pricing changes via your **RPOWER** System, keeping your customer marketing in sync with your **RPOWER** System.

Customer-Facing Marketing

RPOWER can accommodate a secondary LCD at each register for looping video advertisement without costly needs for third party software. The **RPOWER** Polebug, a virtual pole display depicted on the customer facing LCD, removes the additional cost of traditional customer pole display hardware.
